MEMORANDUM

TO: School Librarians

FROM: Clarence Coffindaffer
State Librarian
South Dakota State Library and Archives

SUBJECT: Microcomputer Software for School Library Applications

The enclosed listing of microcomputer software for school library applications has been compiled in an effort to assist you as you search for ways to make your library's operation more efficient and effective.

The majority of school libraries in South Dakota are "one-person operations". No doubt many of you feel extremely stretched as you select materials, provide reference service to students, teachers, classes and staff, book films and audiovisual materials, repair equipment, check out books and materials, and the numerous other tasks that require your daily attention.

Because it can be used to perform several of the routine tasks of a library operation, a microcomputer can be a very helpful tool in making your library more efficient. This will allow you to devote additional attention to expanding and improving services to the clientele of your library.

If you have any questions about the content of this publication, please contact Donna Gilliland at the South Dakota State Library and Archives (1-800-592-1841).
